

Lab-Change a file and save changes locally

Pre-requisites:

- 1.) Lab-Clone a Repository locally should be executed.

Steps to Follow

1. To modify the test file with some content, Type the command: `$ echo "Hello World, Updated" >test.txt`
2. To add the modified file in git locally, Type the command: `$ git add test1.txt`
3. To commit the changes, Type the command: `$ git commit -m '<any message>'`
