Lab-Collaboration

Collaboration - Add contributors on GitHub repository and set permissions for them

Pre-requisites:

1.) GitHub repo should be available.

Steps to Follow

1. Login to the GitHub account;
2. Open the Repo;
3. Click on Settings tab;
4. Click on Collaborators
5. Search for the github user id to add as collaborator;
6. Select the User ID
7. Click on Add Collaborator button

This should send an invite to the person added as collaborator. The invited user has to accept the invitation by logging into his github account. After accepting the invitation, the new user would be authorised to commit the changes in the repo.
